JUM Journal of Ultrasound in Medicine

aium

Guidelines for Authors

1. MANUSCRIPT CATEGORIES

Journal of Ultrasound in Medicine publishes manuscripts in the following categories:

Case Series—A paper that describes a group of cases or particular observations with unique imaging features or involving novel procedures. Case Series are usually composed of at least 3 cases, retrospective, and not associated with extensive statistical analysis.

Clinical Letter—A brief description of a single unique or unusual case. The letter should include a title, authors' names, degrees, and affiliations, text without headings, and up to 10 references. No more than 4 images. Figure parts (ie, 1A or 1B) are counted as a separate image. It should not contain tables or data analysis. Letters generally are not peer-reviewed and published at the discretion of the editor based on space available.

Commentary—A short paper that describes the personal views of the author on a particular subject. It includes some review of the literature in making a point, although it is clearly an opinion piece rather than a review of the subject.

Editorial—This article type is by Invitation Only.

Invited Special Communication—This article type is by Invitation Only.

Letter to the Editor—Brief comments on published material and should be objective, constructive, and educational.

Original Article—A research paper that provides new information derived from original data and usually includes extensive statistical analysis.

Pictorial Essay—A paper in which the message is primarily contained in the images, with the text and legends to the images providing brief historical, descriptive, or interpretive information. A Pictorial Essay does not contain data or new statistical analysis but rather provides its message through unique and timely images. Pictorial essays must not be a single case.

Review Article—An in-depth analysis of the current status of a particular topic. It is not an original article with new data but represents a well-balanced summary of a timely subject with reference to the

literature.

Sound Judgment—A brief article focusing on one clinical problem describing the use of sonography, in contrast to other diagnostic tests. Describe how the sonographic examination is performed and interpreted. Figures should illustrate the technique, relevant anatomy, and/or sonographic findings. Supplemental video(s) are encouraged.

Advancing through Innovation—A paper that describes a new method, procedure, technology, technique, or treatment with a practical approach.

Reply—This article type is by Invitation Only.

Reporting Standards
Authors are asked to adhere to the reporting standards commensurate with the type of article being submitted. See **https://www.equator-network.org/** for more information.

2. ORGANIZATION OF THE MANUSCRIPT

Manuscripts should be organized in the following order, as applicable: title page, abstract or summary, full text, acknowledgments, references, tables, figure legends, and figures. All text elements and tables should be combined in a single document, double-spaced, with line numbering.

Cover Letter

A standard cover letter should be summarizing and focus on the importance and uniqueness of your findings, as well as how they relate to the scope of the journal.

Title Page

This first page should contain the complete title of the article, manuscript category, names and credentials of all authors, institutional affiliations of all authors, and a short running title (⩽60 characters). The corresponding author should be indicated, including a complete mailing address, telephone number, and e-mail address.

Abstract or Summary

An abstract is required for Original Article articles. The abstract should be divided into Objectives, Methods, Results, and Conclusions sections. It should not exceed 250 words. Three to 6 key words should be provided at the end. The abstract should not contain figures, tables, or reference citations, trade names, or manufacturer names. Statements of statistical significance should include *P* values or 95% confidence intervals. The abstract should not include data that are not given in the full text.

In place of an abstract, a summary is required for Review Articles, Pictorial Essays, Advancing through Innovation, Sound Judgment, and Case Series. Content should adhere to the guidelines for abstracts but should not be divided into sections. It should not exceed 100 words and should give a brief overview of the article. Three to 6 key words should be provided at the end.

Full Text

For Original Article articles, the full text of the manuscript should be divided into the following sections: Introduction, Materials and Methods, Results, and Discussion. For other articles, the text may be divided into sections if desired.

Acknowledgments

On a separate page preceding the references, contributions made by colleagues who are not authors of the paper should be acknowledged. This page should also include acknowledgments of published material reproduced with permission, previous presentations of the work at meetings, related grant support received, and disclosures of relevant commercial interests.

References

Each reference must be cited numerically and listed in the order in which it appears in the text. Duplicate references should not be listed; rather, subsequent citations of a reference should use its initial number. When more than 6 authors are included in a reference, et al replaces the names of all authors after the first 3. Inclusive page ranges should be given where applicable.

Accepted work in press includes the journal title or the publisher if it is a book. Material not accepted for publication cannot be included as a reference and should be cited parenthetically in the text as unpublished data, including all participants' initials and surnames and the year.

Abbreviations of journal titles should conform to those used in the National Library of Medicine's *PubMed* (**www.pubmed.gov**). The style and punctuation of references should follow the formats illustrated by the following examples:

Journal Article With Up to 6 Authors

1. Luo W, Zhou X, Gong X, Zheng M, Zhang J, Guo X. Study of sequential histopathologic changes, apoptosis, and cell proliferation in rabbit livers after high-intensity focused ultrasound ablation. *J Ultrasound Med* 2007; 26:477–485.

Journal Article With More Than 6 Authors

2. Fleischer AC, Lyshchik A, Jones HW Jr, et al. Contrastenhanced transvaginal sonography of benign versus malignant ovarian masses: preliminary findings. *J Ultrasound Med* 2008;27:1011–1018.

Journal Article Published Online Ahead of Print

3. Cummisford K, Sundar S, Hagberg R, Mahmood F. Real-time three-dimensional transesophageal echocardiography and a congenital bilobar left atrial appendage [published online ahead of print June 24, 2009]. *J Cardiothorac Vasc Anesth*. doi:10.1053/j.jvca.2009.04.005.

Abstract of a Paper Presented at a Meeting

4. Shipp TD, Bromley B, Benacerraf BR. Comparison of the fundal endometrial diameters using 3-dimensional rendering for those with embedded and nonembedded intrauterine devices [abstract]. *J Ultrasound Med* 2009; 28 (suppl):S47.

Whole Book

5. Cardenosa G. Breast Imaging. 1st ed. Philadelphia, PA: Lippincott Williams & Wilkins; 2004.

Edited Book

6. McGahan JP (ed). Interventional Ultrasound. Baltimore, MD: Williams & Wilkins; 1990.

Chapter in a Book

7. Caspers JM, Reading CC, McGahan JP, Charboneau JW. Ultrasound-guided biopsy and drainage of the abdomen and pelvis. In: Rumack CM, Wilson SR, Charboneau JW (eds). *Diagnostic Ultrasound*.

2nd ed. St Louis, MO: CV Mosby Co; 1997:599–628.

Website

8. Online Mendelian Inheritance in Man. National Center for Biotechnology Information website. http://www.ncbi.nlm.gov/omim. Accessed June 15, 2010.

Tables

Tables must be numbered consecutively with Arabic numerals in the order in which they appear in the manuscript. Each table should appear on a separate page and should contain a title that includes the table number. No vertical lines or borders may appear in a table. Tables must contain all necessary information so that they may stand alone, independent of the text. Data given in the text should not be duplicated in tables. All tables must be cited in numerical order in the text.

Tables should be included in the text document and should not be submitted as graphics.

Figure Legends

For initial submissions, figure legends should be provided with their corresponding images at the end of the text document. Figures must be numbered consecutively with Arabic numerals in the order in which the figures appear in the article. All figures must be cited in numerical order in the text. See Section 3 for more information.

Abbreviations

Abbreviations of common clinical and technical terms listed in the *American Medical Association Manual of Style, 10th Edition,* may be used if they appear 3 or more times in the full text and abstract/summary, respectively. Each abbreviation should be defined at first use in the full text and abstract/ summary, respectively. Use of other abbreviations is discouraged unless they are essential to the clarity of the manuscript.

3. MANUSCRIPT SUBMISSION PROCESS

New Manuscript Submissions

New submissions should be made via the **Wiley Authors submission portal**. Should your manuscript proceed to the revision stage, you will be directed to make your revisions via the same submission portal. You may check the status of your submission at anytime by logging on to submission.wiley.com and clicking the "My Submissions" button. For technical help with the submission system, please review our **FAQs** or contact **submissionhelp@wiley.com**.

Prepare version 1 manuscripts as follows:

Manuscripts can be uploaded either as a single document (containing the main text, tables and figures), or with figures and tables provided as separate files. Should your manuscript reach revision stage, figures and tables must be provided as separate files. The main manuscript file can be submitted in Microsoft Word (.doc or .docx) format.

Your main document file should include:

- A short informative title containing the major key words. The title should not contain abbreviations

- The full names of the authors with institutional affiliations where the work was conducted, with a footnote for the author's present address if different from where the work was conducted;
- Acknowledgments;
- Abstract structured (intro/methods/results/conclusion) or unstructured
- Up to seven keywords;
- Practitioner Points (optional) Authors will need to provide no more than 3 'key points', written with the practitioner in mind, that summarize the key messages of their paper to be published with their article.
- Main body: formatted as introduction, materials & methods, results, discussion, conclusion
- References;
- Tables (each table complete with title and footnotes);
- Figures: Figure legends must be added beneath each individual image during upload AND as a complete list in the text
- Embedded Videos: Legends should be placed at the end of the manuscript.

Guidelines for Images of Patients

Images of specific patients should be restricted to 1 figure per patient, with multiple images of the same patient denoted by letters as applicable. Multiple images should be submitted as separate files and will be combined during production; labels and arrows should be included on images. Patient identifiers and manufacturer logos should be removed from images. The legend should begin with a description of the patient, as in the following example:

Figure 1. Infiltrating ductal carcinoma of the left breast in a 40-year-old woman. A, Transverse sonogram showing a hypo-echoic mass with irregular margins. B, Color Doppler sonogram showing increased vascularity in the surrounding tissue.

Embedded Video—Authors can now embed video within their final article. Videos should be up to 5mins in length, and be uploaded as a separate file during the manuscript submission process. The file should not exceed 300MB in size; the combined manuscript files, including video, audio, tables, figures, and text must not exceed 350 MB. If the video includes dialogue, a transcript should be included as a separate file; videos should also include a placeholder image. For full guidance on accepted file types and resolution please see **here**.

Revised Manuscript Submissions

When submitting revised manuscripts, include a rebuttal statement that addresses all reviewer comments.

Text—Two versions of the revised manuscript must be uploaded: one clean copy and one with the changes indicated by the "Track Changes" function; manual highlighting and strikethroughs should not be used to show changes. All text should be double spaced, and all text elements, including tables, should be combined in a single document in the order listed in Section 2. Text documents should include continuous line numbering.

Images and Graphics—For version 2+ manuscripts, graphics must be submitted as individual TIFF, PNG or EPS files according to the requirements for images listed below.

Embedded Video—Before the video is played, a static 'placeholder' image from the video will be displayed in the HTML version of the article. Authors should supply their preferred still image (following our standard image guidelines), and the timestamp within the video in seconds for the still image. This will also be used as a placeholder in the PDF version of the article.

Image Requirements for Revised Manuscripts

Image File Formats—Color or gray scale images should be submitted as TIFF or PNG files. Line art/drawings (images purely black and white) should be submitted as EPS files. Image files should be flattened and contain no alpha channels.

Image Resolution Requirements—300 pixels per inch (ppi) for color or gray scale halftones; 600 ppi for combination halftones (images containing pictures and text).

Image Size Requirements—Single-column image size for the *Journal of Ultrasound in Medicine* is 3.125 inches wide. Double-column image size is 6.5 inches wide.

Image Color Modes—Grayscale images must be submitted in GRAYSCALE mode. Color images must be submitted in CMYK mode. The *Journal of Ultrasound in Medicine* will pay for the publication of color images deemed essential by the editors.

Supplemental Videos—Supplemental video clips can still be submitted, so long as they are designated Supplementary Material for Review file type. For best results, video files should be compressed into a single .zip file. Test video files before submission, preferably on computers not used for their creation, to check for any compatibility issues. Wiley does not host codec files and is not responsible for supporting any supplemental video clips where the codec used is non-standard.

Transfer of Copyright Form

If your paper is accepted, the author identified as the formal corresponding author for the paper will receive an email prompting them to login into Author Services; where via the Wiley Author Licensing Service (WALS) they will be able to complete the license agreement on behalf of all authors on the paper.

Disclosure Form

An ICMJE Conflict of Interest (**http://www.icmje.org/conflicts-of-interest/**) for potential conflicts of interest must be completed by all authors and submitted prior to publication.

Forms should be uploaded with your manuscript files via **https://authors.wiley.com/journal/JUM**.

If there are any changes at subsequent revision stages, please declare them in your cover letter.

Permission to Reproduce Published Material

Written permission from the author and publisher of any previously published figure, table, or lengthy passage of text included in the manuscript must be submitted with the paper. If any form of preliminary publication, other than an abstract of no more than 400 words, has occurred or is contemplated, a reprint or manuscript of the actual or proposed preliminary publication should accompany the manuscript.

4. AUTHORSHIP AND AUTHORITY/RESPONSIBILITY POLICY

The list of authors should accurately illustrate who contributed to the work and how. All those listed as authors should qualify for authorship according to the following criteria:

1. Have made substantial contributions to conception and design, or acquisition of data, or analysis and interpretation of data;
2. Been involved in drafting the manuscript or revising it critically for important intellectual content;

3. Given final approval of the version to be published. Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content; and
4. Agreed to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

Contributions from anyone who does not meet the criteria for authorship should be listed, with permission from the contributor, in an Acknowledgments section (for example, to recognize contributions from people who provided technical help, collation of data, writing assistance, acquisition of funding, or a department chairperson who provided general support). Prior to submitting the article all authors should agree on the order in which their names will be listed in the manuscript.

The intellectual content of the paper is the responsibility of the authors; the editor and the AIUM accept no responsibility for the opinions and statements of authors. While every effort is made by the editor and editorial staff to avoid any inaccurate or misleading information, they accept no liability for the consequences of wrong information. The authors agree to keep the editor and publisher fully indemnified against any liability or claim that may arise from the publication of incorrect or misleading data.

5. ARTIFICIAL INTELLIGENCE GENERATED CONTENT

Artificial Intelligence Generated Content (AIGC) tools—such as ChatGPT and others based on large language models (LLMs)—cannot be considered capable of initiating an original piece of research without direction by human authors. They also cannot be accountable for a published work or for research design, which is a generally held requirement of authorship (as discussed in the previous section), nor do they have legal standing or the ability to hold or assign copyright. Therefore—in accordance with **COPE's position statement on AI tools**—these tools cannot fulfill the role of, nor be listed as, an author of an article.

If an author has used this kind of tool to develop any portion of a manuscript, its use must be described, transparently and in detail, in the Methods or Acknowledgements section. If authors have used this kind of tool to create images for submission and publication (e.g., as part of formal research design or methods) its use must also be fully described. The author is fully responsible for the accuracy of any information (including images) provided by the tool and for correctly referencing any supporting work on which that information depends. Tools that are used to improve spelling, grammar, and general editing are not included in the scope of these guidelines. The final decision about whether use of an AIGC tool is appropriate or permissible in the circumstances of a submitted manuscript or a published article lies with the journal's editor.

GenAI tools should be used only on a limited basis in connection with peer review. A GenAI tool can be used by an editor or peer reviewer to improve the quality of the written feedback in a peer review report. This use must be transparently declared upon submission of the peer review report to the manuscript's handling editor. Independent of this limited use case, editors or peer reviewers should not upload manuscripts (or any parts of manuscripts including figures and tables) into GenAI tools or services. GenAI tools may use input data for training or other purposes, which could violate the confidentiality of the peer review process, privacy of authors and reviewers, and the copyright of the manuscript under review. Moreover, the peer review process is a human endeavour and responsibility and accountability for submitting a peer review report, in line with a journal's editorial polices and peer review model, sits with those individuals who have accepted an invitation from a journal to undertake the peer review of a submitted manuscript. This process should not be delegated to a GenAI tool.

6. INSTITUTIONAL REVIEW BOARD APPROVAL AND INFORMED CONSENT

For all manuscripts reporting data from studies involving human participants or animals, formal review and approval, or formal review and waiver, by an appropriate institutional review board or ethics committee is required and should be described in the Methods section. For those investigators who do not have formal ethics review committees, the principles outlined in the Declaration of Helsinki should be followed (see **https://www.wma.net/policies-post/wma-declaration-of-helsinki-ethical-principles-for-medical-research-involving-human-subjects/**). For investigations of humans, state in the Methods section the manner in which informed consent was obtained from the study participants (for example, oral or written, or formal waiver). Editors may request that authors provide documentation of the formal review and recommendation from the institutional review board or ethics committee responsible for oversight of the study. When reporting experiments on animals, authors should indicate whether the institutional and national guide for the care and use of laboratory animals was followed. Manuscripts that do not comply with these rules will not be accepted for publication.

7. BIOEFFECT STUDIES AND OTHER STUDIES THAT DEPEND ON ACOUSTIC OUTPUT

Authors who report on bioeffects studies and other studies that depend on acoustic output, are encouraged to employ the assistance of those trained in acoustic output measurement and characterization. They are also encouraged to seek the assistance of the manufacturers of their systems to ensure adequate hydrophone-based calibration and sufficiently accurate estimates or measurements of pertinent acoustic output parameters. Ultrasound insonation parameters and acoustic output information must be reported in subsequent publications. See the AIUM Statement on Data Needed to Characterize Ultrasound System Output (**https://www.aium.org/resources/official-statements/view/statement-on-data-needed-to-characterize-ultrasound-system-output**).

8. DATA SHARING AND DATA CITATION

JUM encourages authors to share the data and other artifacts supporting the results in the paper by archiving it in an appropriate public repository. Authors should include a data availability statement, including a link to the repository they have used, in order that this statement can be published alongside their paper. Sample availability statements can be seen **here.**

In recognition of the significance of data as an output of research effort, JUM and Wiley have endorsed **the FORCE11 Data Citation Principles**. Data must be cited in the same way as article, book, and web citations and authors are required to include data citations as part of their reference list.

Data citation is appropriate for data held within institutional, subject focused, or more general data repositories. It is not intended to take the place of community standards such as in-line citation of GenBank accession codes. When citing or making claims based on data, authors should refer to the data at the relevant place in the manuscript text and in addition provide a formal citation in the reference list. We recommend the format proposed by **the Joint Declaration of Data Citation Principles:**

[dataset] Authors; Year; Dataset title; Data repository or archive; Version (if any); Persistent identifier (e.g. DOI)

Add [dataset] immediately before the reference so we can properly identify it as a data reference. The [dataset] identifier will not appear in your published article.

For more information about our Data Citation Policy, visit our **Frequently Asked Questions page**.

9. AIUM POLICY ON MANAGING ALLEGATIONS OF SCIENTIFIC MISCONDUCT

If substantial doubts arise about the honesty or integrity of work, either submitted or published, it is the editor's responsibility to ensure that the question is appropriately pursued, usually by the authors' sponsoring institution. However, it is not ordinarily the task of editors to conduct a full investigation or to make a determination; that responsibility lies with the institution where the work was done or with the funding agency. The Editor-in-Chief should be promptly informed of the final decision, and if a fraudulent paper has been published, the journal must publish a retraction. If this method of investigation does not result in a satisfactory conclusion, the editor may choose to conduct his or her own investigation. As an alternative to retraction, the editor may choose to publish an expression of concern about aspects of the conduct or integrity of the work.

The retraction or expression of concern, so labeled, should appear on a numbered page in a prominent section of the journal, be listed in the contents page, and include in its heading the title of the original article. It should not simply be a letter to the editor. Ideally, the first author should be the same in the retraction as in the article, although under certain circumstances the editor may accept retractions by other responsible persons. The text of the retraction should explain why the article is being retracted and include a full original citation reference to it.

The validity of previous work by the author of a fraudulent paper cannot be assumed. An editor may ask the author's institution to assure them of the validity of earlier work published in their journals or to retract it. If this is not done, editors may choose to publish an announcement expressing concern that the validity of previously published work is uncertain.

Self plagiarism occurs when a writer republishes a work in its entirety or reuses portions of a previously written text while authoring a new work. Whereas plagiarism refers to the practice of claiming credit for the words, ideas, and concepts of others, self-plagiarism refers to the practice of presenting ones own previously published work as though it were new. In some instances the re-use of identical text is unavoidable, as in the descriptions used in the methods section of an article. JUM utilizes iThenticate software during the submission process to identify instances of text overlap between submitted articles and those in the published literature. Any article that returns a rate of overlap of more than 25% will be investigated further per the COPE Text Recycling Guidelines (**https://publicationethics.org/text-recycling-guidelines**). JUM retains the right to reject any submission that shows clear evidence of self plagiarism and/or attempted duplicate publication.

10. EDITING

Accepted manuscripts will be copyedited to eliminate grammatical and typographical errors and to ensure conciseness and clarity. The corresponding author will receive proofs of the copyedited article before publication.

11. WILEY EDITING SERVICES

Article Preparation Support

Wiley Editing Services offers expert help with English Language Editing, as well as translation, manuscript formatting, figure illustration, figure formatting, and graphical abstract design – so you can submit your manuscript with confidence.

Also, check out our resources for **Preparing Your Article** for general guidance about writing and preparing your manuscript.

Article Promotion Support

Wiley Editing Services offers professional video, design, and writing services to create shareable video abstracts, infographics, conference posters, lay summaries, and research news stories for your research – so you can help your research get the attention it deserves.

12. PERMISSION REQUESTS

No part of this publication may be reproduced, stored or transmitted in any form or by any means without the prior permission in writing from the copyright holder. Authorization to copy items for internal and personal use is granted by the copyright holder for libraries and other users registered with their local Reproduction Rights Organisation (RRO), eg, Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923, USA (**www.copyright.com**), provided the appropriate fee is paid directly to the RRO. This consent does not extend to other kinds of copying such as copying for general distribution, for advertising or promotional purposes, for republication, for creating new collective works or for resale. Permissions for such reuse can be obtained using the RightsLink "Request Permissions" link on Wiley Online Library. Special requests should be addressed to: **permissions@wiley.com.**

13. SUBMISSION OF NIH-FUNDED WORKS TO PUBMED CENTRAL

The accepted version is the version that incorporates all amendments made during peer review, but prior to the publisher's copyediting and typesetting. The NIH mandate applies to all articles based on research that has been wholly or partially funded by the NIH and that are accepted for publication on or after April 7, 2008.

14. ACADEMIC INSTITUTIONAL REPOSITORIES

To assist in disseminating scholarly articles in academic institutional repositories, faculty members may provide an electronic copy of their final version of an article, as well as a direct link to the manuscript via the *Journal of Ultrasound in Medicine* website, provided the manuscript will not be sold for profit. Manuscripts should be submitted no earlier than 12 months after publication, with the first of the issue month considered the date of publication.

15. CONTACTING THE JOURNAL

The *Journal of Ultrasound in Medicine* Editorial Office may be contacted through the following:

Journal of Ultrasound in Medicine

American Institute of Ultrasound in Medicine

14750 Sweitzer Ln, Suite 100 • Laurel, MD 20707 USA

E-mail: **jum@wiley.com**

Manuscripts are considered for publication with the understanding that they are submitted solely to the *Journal of Ultrasound in Medicine* and are not under consideration elsewhere.
